TOBACCO 21

TOBACCO 21

The initiative to raise the tobacco purchase age from 18 to 21

Current tobacco use trends are driving new prevention strategies

- In Illinois, 6,300 teens become new daily smokers each year.¹ In suburban Cook County, 29 percent of high school seniors use tobacco products.²
- While great strides have been made in tobacco prevention, declines in tobacco use rates have slowed and products like cigarillos, hookah, and e-cigarettes are now used at double the rate of cigarettes.²
- Reducing teens' access to tobacco products is a proven means to reduce current use and prevent initiation.

The age of 21 is important for prevention

- 95 percent of smokers start before the age of 21.³
- The majority of underage tobacco users get their tobacco from a peer; however, 90 percent of those suppliers are themselves often under the age of 21.⁴
- Drawing the line at 21 gets legal tobacco purchasers out of high schoolers' social circles.

Tobacco 21 saves lives and improves health

- The Institute of Medicine projects that Tobacco 21 could reduce overall smoking by 12 percent by the time today's teenagers become adults; the biggest declines in tobacco use would be seen among 15-17 year olds (25%) and 18-20 year olds (15%).⁵
- Tobacco 21 would immediately improve community health by reducing inflammation, improving immune function, and reducing premature births and SIDS.

The economic impact of Tobacco 21

- Economists project that nationally, Tobacco 21 could save \$212 billion in medical costs.⁶
- Each year, tobacco use costs Illinois \$5.49 billion in health care costs and \$5.27 billion in lost productivity.¹
- The impact of Tobacco 21 on retail sales would be minimal since the 18-21 year old age group only accounts for 2 percent of overall tobacco sales.⁷

Tobacco 21 enjoys broad support across Illinois and the U.S., even from smokers!

- A 2015 CDC study found that 75 percent of adults support Tobacco 21, including 70 percent of current smokers.⁸ A recent study also found that 68 percent of 18-24 year olds would support Tobacco 21.⁹
- More than 220 cities across 16 states, plus the states of California and Hawaii, have enacted Tobacco 21.¹⁰
- In Illinois, Tobacco 21 has already been adopted by Evanston, Chicago, Oak Park, Highland Park, Naperville, Deerfield and Maywood, and is being considered by dozens more communities.

TOBACCO 21

raises the age to purchase tobacco products

including e-cigarettes, hookah, etc.

FROM 18 TO 21

PROJECTED HEALTH OUTCOMES

25%

decline in 15- to 17-year-olds starting to smoke

12%

overall drop in smoking prevalence

10%

reduction in smoking-related deaths

12%

decline in premature births

16%

drop in SIDS cases

BUT IF YOUTH SMOKING RATES PERSIST...

1 in 13

Americans age 17 or younger will die early from a smoking-related illness

230,000 Illinois teens alive today will die prematurely from smoking

ECONOMIC IMPACT

Economists project that nationally, Tobacco 21 could save

\$212 BILLION

in medical costs.

Each year, tobacco use costs Illinois

\$5.49 BILLION in healthcare costs

\$5.27 BILLION in lost productivity

(That's **\$982** per household per year.)

TEENAGE YEARS

ARE A **CRITICAL TIME** FOR TOBACCO PREVENTION

of smokers start before age 21

“Today’s teenager is tomorrow’s potential regular customer, and the overwhelming majority of smokers first begin to smoke **while still in their teens...**”

Philip Morris executive (1981)

of suburban Cook County high school seniors use tobacco products

T21 gets legal tobacco purchasers out of teen social circles

of suppliers to teenage tobacco users are also under 21

TO SUM UP

TOBACCO 21 is being adopted by **hundreds of communities** and will ultimately **save millions** in healthcare costs, save lives, and immediately improve community health.
